

Actively Managed Industrial Civilization Portfolio

Portfolio Thesis

This portfolio is designed around the belief that future technological and economic growth will increasingly depend on:

- advanced semiconductor infrastructure
- electrification
- industrial automation
- power generation and distribution
- advanced manufacturing
- materials science
- cybersecurity
- strategic industrial ecosystems

The portfolio emphasizes companies and industrial systems with:

- durable engineering and manufacturing advantages
- infrastructure-level importance
- enabling roles within technological ecosystems
- long-duration demand drivers
- exposure to industrial modernization and computational scaling

The strategy combines:

- concentrated conviction in strategically important infrastructure and industrial companies
- geographic diversification across major manufacturing ecosystems
- selective use of ETFs for broad ecosystem exposure and portfolio stability
- active management and periodic reassessment based on valuation, technological leadership, industrial cycles, and macroeconomic conditions

The objective is to build long-term exposure to the physical and industrial systems supporting advanced computation, electrification, automation, and manufacturing complexity.

Portfolio Allocation Summary

Layer	Allocation
Core Stability Layer	20%
Industrial Infrastructure Layer	35%
Strategic Conviction Layer	35%

Layer	Allocation
Cash / Tactical Reserve	10%

Core Stability Layer — 20%

Theme	Ticker	Allocation	Purpose
US Market Exposure	VOO	10%	Broad US economic participation and baseline market survivability
International Developed Markets	VXUS	5%	Geographic diversification and exposure to non-US industrial ecosystems
Chinese Industrial Innovation	CNXT	5%	Exposure to Chinese advanced manufacturing, batteries, automation, and industrial electronics

Industrial Infrastructure Layer — 35%

Theme	Ticker	Allocation	Role in Thesis	Why It Was Chosen
AI Compute Infrastructure	NVDA	8%	AI compute backbone	Dominant accelerated computing ecosystem and hyperscaler infrastructure
Semiconductor Manufacturing	TSM	6%	Advanced chip manufacturing	Strategically critical semiconductor foundry
Semiconductor Manufacturing Infrastructure	ASML	5%	Lithography infrastructure	Near-monopoly on EUV lithography systems
Semiconductor Process & Materials Engineering	AMAT	4%	Semiconductor fabrication systems	Materials engineering and process infrastructure
Electrification Infrastructure	ETN	5%	Power systems and electrification	Critical electrical infrastructure and grid modernization
Data Center Infrastructure	VRT	3%	Cooling and power density infrastructure	AI-driven data center infrastructure scaling

Theme	Ticker	Allocation	Role in Thesis	Why It Was Chosen
Industrial Materials Science	LIN	2%	Industrial gases and manufacturing	Essential semiconductor and industrial process inputs
Copper Electrification Bottleneck	FCX	2%	Copper demand from electrification	Direct electrification bottleneck exposure

Strategic Conviction Layer — 35%

Theme	Ticker	Allocation	Role in Thesis	Why It Was Chosen
Cybersecurity Infrastructure	CRWD	5%	AI-era infrastructure security	Cloud-native recurring revenue security platform
Industrial Automation Systems	ROK	5%	Factory modernization and automation	Industrial control systems and automation infrastructure
Precision Industrial Engineering	PH	4%	Motion control and industrial systems	Precision industrial and aerospace systems
Chinese Manufacturing Ecosystem	BYDDY	5%	Battery and manufacturing ecosystem	Vertical integration and industrial manufacturing scale
Power Generation & Grid Modernization	GEV	4%	Power generation and transmission systems	Grid modernization and electricity demand scaling
Memory & Data Scaling	MU	4%	High-bandwidth memory infrastructure	AI memory scaling and data center demand
Industrial Chemistry & Manufacturing Inputs	APD	4%	Industrial process chemistry	Advanced manufacturing ecosystem inputs
Tactical / Rotational Allocation	TBD	4%	Flexible allocation	Reserved for evolving themes, opportunities, and dislocations

Cash / Tactical Reserve — 10%

Allocation	Purpose
10%	Opportunistic buying, volatility management, and tactical flexibility
